

# Window LadderLift Specifications

## Lift Capacity\*

- LL185 (2 cup system).....246 pounds
- LL185c3DL (3 cup system).....369 pounds

The Window Ladderlift can not be used to lift any load (include the window and glass weight plus the 52lb. weight of the Window LadderLift in total ladder capacity calculation) heavier than the stated weight capacity of the ladder that the Window LadderLift System is mounted on.

Example: ANSI Type 1AA...375 lb. capacity  
ANSI Type 1A.....300 lb. capacity  
ANSI Type 1.....250 lb. capacity

## General information:

The Window LadderLift is manufactured for us and our distributors through an exclusive licensing arrangement between Window LadderLift, LLC and Wood's Powr-Grip, Inc.. Metal used in the mainframe of lift system is 6063 T-6 aluminum alloy, the "improvements for 2009" replaced the original hand winch with a heavier capacity unit that also features a built in brake system with no directional lever to contend with, you simply wind clock-wise to lift the load and counter clock-wise to lower, you can take your hands away at any time during the process without fear of losing the load. 5/16" steel cable for smoother winding and spooling, redesigned Sliding Cup Mounting Assembly will now accept the ABS model n4000 or the Metal Handle model n4950 Wood's Powr-Grip 8" Vacuum Suction Cups and because it attaches at the base ring of the Cup (same base ring used in metal handle and abs handle cups) there is no difference in lift capacity or safety.

\*Wood's Powr-Grip 8" ABS and Steel Handle Vacuum Suction Cups are tested @ 500 lb. lift capacity ea. and features a 4 to 1 safety ratio rating of 123 lbs. each. The Mechanical Winch component of this lift system has a safety rating capacity of 800 lb., the Steel Wire Rope (cable) has a 2000 lb. rated capacity, all other components of the Window LadderLift System have been engineered and tested to exceed the 2 cup and 3 cup systems capacity's, plus, the OSHA Ladder Compliance no. 1926.1053 requires all Commercial Ladders to be capable of supporting 3.3 times their rated capacity, but in spite of all the safety and lift capacity built into our product there is always some "block-head" in the installation field who insists on using a residential or under-rated ladder as the mount on component of this lift system, therefore, we will only warrant and print the stated capacity on the Window LadderLift as 185 pounds.
